What problem does kustodian_ solve?

- Challenges in the onboarding process for new hires:
    - Lengthy waiting time for necessary permissions to work.
    - Manual setup of permissions for each development tool used.
- Transfer between teams or projects can pose difficulties.
- Diverse range of development tool stacks worldwide result in varying permission management systems.
- Security risks and the need for history tracking.
- Importance of a well-defined onboarding process and development plan for new hires (and existing ones).

Why kustodian_? (1)

Automates and speeds up your processes:

- Automates on/off-boarding,

- Track's role changes and reduces security risks,

- Speeds up access to your Dev tool stack,

- Automates and centralizes permission management.

Why kustodian_? (2)

Manage your dev tool stack portfolio:

- Eliminate manual permission management for each dev tool,

- Improve observability and manage all project resources in one place,

- Easy and safely switch team member roles,

- Adjust your kustodian_ with the best-fit adapters.

Why kustodian_? (3)

Take care of your working culture:

- Enable newcomers to start contributing at day one,

- Encourage a personal development plan,

- Easy insight into other employees' skills.

How it works?

Adapters_

Available for use:

- GitLab (both on-prem and cloud)

- Kubernetes (including Red Hat OpenShift flavor)

    - Also capable to integrate with managed k8s cluster on AWS, Azure, GCP

    - Including ROSA and ARO also

- Atlassian Confluence

- SonarQube

Adapters roadmap_

- H2 2023.:
    - Microsoft 365
      for managing MS Teams
    - Jenkins
    - Sonatype Nexus
- Open-Source Adapter SDK
    - Have a custom internal system you would like to manage with Kustodian?
      We got you covered!
    - Currently only Java SDK is available, plan to expand to GoLang and NodeJS
    - Marketplace and SDK releases planned for EOY
      Think about Adapters like Operators for OpenShift
